

“PEEK-A-BOO!”

As the snow melts away towards the season's end, sadly some Resort Managers at ski fields around the world will begin to discover the millions of unwanted souvenirs left behind by this season's skiers.

Cigarette butts are toxic and take from 4-15 years to break down. Littered butts also cause fires.*

This doesn't need to happen.

Fact:

Distributing 'Mini-Butts' Personal Ashtrays can eliminate your visitors cigarette butt litter (and risk of fires*) and prevent this environmental obscenity happening to you (again?) at the ski season's end.

Mini-Butts are also an excellent eco-friendly promotional product your visitors will use again & again long after they've left your location.

***If your resort operates over the summer months you should call us today.**

For samples and an information kit contact No Butts today.
