

...because the world is not an ashtray.

Eco-Pole Ashtray - Wall/Post-mounted Installation and Maintenance Info

Thank you for purchasing a No BuTTs Eco-Pole Ashtray and allowing us to assist you with your requirements. Eco-Pole installation is very straight-forward but to avoid any problems, **please read the instructions fully before you start.**

If you require additional assistance please call (61-3) 9399-8133.

Please Note: All Eco-Pole Ashtrays are completely weather resistant - and rust & corrosion proof and can be mounted anywhere, either undercover or exposed to the elements. Eco-Pole DRY system simply refers to the fact that unlike the Eco-Pole WET system, The Eco-Pole DRY is not designed to be water fillable. (Ie liquid charged)

Installation:

Eco-Pole Ashtrays are normally installed on external walls of buildings, verandas, etc or in designated smoking zones where smokers can dispose of their cigarette butts.

Installation Pack includes: 1 x key*, 2 x dynabolts, 1 x tightening spanner

Tools Required: drill, spirit level, marking pencil.

Eco-Poles are designed to provide flexible mounting options and can be wall or post mounted.

Wall-Mounting: Attach using the included dynabolts. Wall-plugs & screws/bolts can also be used.
Post-Mounting: Attach using a metal adjustable hose clamp of appropriate size for the post.

When installing your Eco-Pole Ashtray it is suggested that the surrounding area be thoroughly cleaned of all cigarette butts. Smokers will easily notice that there is an Eco-Pole installed for their use.

A suitable corporate notice or sign can be placed nearby to advise staff and the public that the Eco-Pole Ashtray has been installed for their convenience and to protect the environment from toxic and unsightly cigarette butt litter. Appropriate signage can be obtained from No BuTTs and corporate logo'd signs with specific information can also be ordered.

Maintenance:

Eco-Pole Ashtrays are designed for cigarette butts only and therefore have 3 small entry points which eliminates any trash problems or risk of sharps.

Your Eco-Pole Ashtray **MUST be emptied and cleaned on a regular basis** by staff or contract cleaners at least weekly - or as needed to prevent overflow. Eco-Pole capacity = 500+ butts.

To empty and clean your Eco-Pole Ashtray simply place a bucket or plastic bag underneath the unit and unlock with the key. The trap-door will open and all butts will drop out of the unit. Close the bottom trap-door and relock the Eco-Pole. It's that simple!

Note: For Eco-Pole WET-System ensure that the trap-door gasket is clean and free of ash and debris prior to re-closing the Eco-Pole. (Use included brush or a rag) This will guarantee a tight seal with no fluid leakage. If filling with water use a maximum of 300 mls. DO NOT OVERFILL.

It is recommended that the key be given to your cleaner (with a copy of these instructions). All Eco-Pole Ashtrays use a same key system so if you have ordered multiple Eco-Poles, you'll have spare keys. **For single unit installations we strongly recommend the purchase of a spare key or two.** Please don't lose your key!!! However if you do, spare keys are always available from No BuTTs for a small charge.

All No BuTTs Ashtrays and their accessories are available on our fully secure e-commerce web-site at www.nobutts.com.au Thanks again for choosing No BuTTs Eco-Pole Ashtrays.
